

Leading The Way in a \$16Trillion Industry ‘The Diamond Powered Crypto’

About KimberLite

Welcome to the future of the global economy. We are currently witnessing a digital transformation as traditional finance and investments undergo a seismic shift towards greater efficiency and accessibility. This revolution is being fuelled by Tokenization of Real World Assets (RWA).

At the forefront of this economic innovation is **KimberLite Token**, the worlds first Web3 ecosystem powered by diamonds and precious commodities.

KimberLite creates **Tangible Non-Fungible Tokens** (TNFTs) that are backed by physical diamonds held in secure storage and brings them to the Blockchain. These virtual digital assets can be exchanged for their real-world diamond equivalent at any time, offering the ultimate in security and investor privacy.

Additionally, with our focus on optimisation and cutting-edge technology, KimberLite is poised to permanently **disrupt** and reshape the diamond industry.

The diamond market has long been plagued by challenges, from lack of transparency and inefficient payment processes to exclusive access for investors and limitations of existing cryptocurrencies. But now, KimberLite Token is here to change the game.

Transparency is key, and with KimberLite Token, every diamond transaction recorded on our platform is public and verifiable online. This eliminates the risk of counterfeit diamonds and ensures a **trustworthy marketplace** for all participants.

Blockchain technology also enables instant validation of buyer funds, making diamond trades **faster** and more **efficient**. No more waiting for payment confirmations or dealing with complex processes. With KimberLite Token, the trading experience is seamless and hassle-free.

We understand concerns about volatility of existing cryptocurrencies, so KimberLite Token focuses on **stability**. Our cryptocurrency provides a reliable and consistent value, ensuring a steady and predictable market for investors.

KimberLite Token is at the core of our ecosystem. It serves as the medium of exchange for buying and selling diamonds, providing a secure and efficient means of completing transactions. But it is not just about diamonds. Our exclusive currency is also used for in-game purchases and trading TNFTs within our ecosystem.

Roadmap

Feb 2022

Token Generation Event

KimberLite Token (\$KIMBER) was officially minted on February 28th, 2022 using the Binance Chain network.

Q2 2024

Commence IDO Round

Our Initial DEX Offering (IDO) will be run as a fair sale locking additional liquidity behind the token.

Q2 2024

CEX Listing of KimberLite

KimberLite intends to list on up to three major centralised exchanges starting from Q2 2024.

Q3 2024

KimberMarket Launch

KimberMarket will launch and begin selling Diamonds in TNFT format with Gold TNFTs added later.

Q2 2025

Beta Testing KimberRush

Our metaverse Play-to-Earn game KimberRush will go live and beta testing will commence.

Q1 2026

Roll Out Plan

We have prepared a detailed 'roll-out' plan which will be completed in Q1 2026. Our target at that stage is for \$KIMBER to reach 10% market share.

\$KIMBER token

An all in one token, serving as the backbone of the ecosystem and accelerating industry operations at scale.

KimberWallet

KimberWallet is a secure, mobile cryptocurrency wallet which gives users from anywhere in the world the ability to interact with the KimberLite ecosystem.

KimberMarket

KimberMarket gives everyone the opportunity to acquire precious commodities directly through the purchase of Tangible-Non-Fungible-Tokens (TNFTs), which are always redeemable for their physical counterpart.

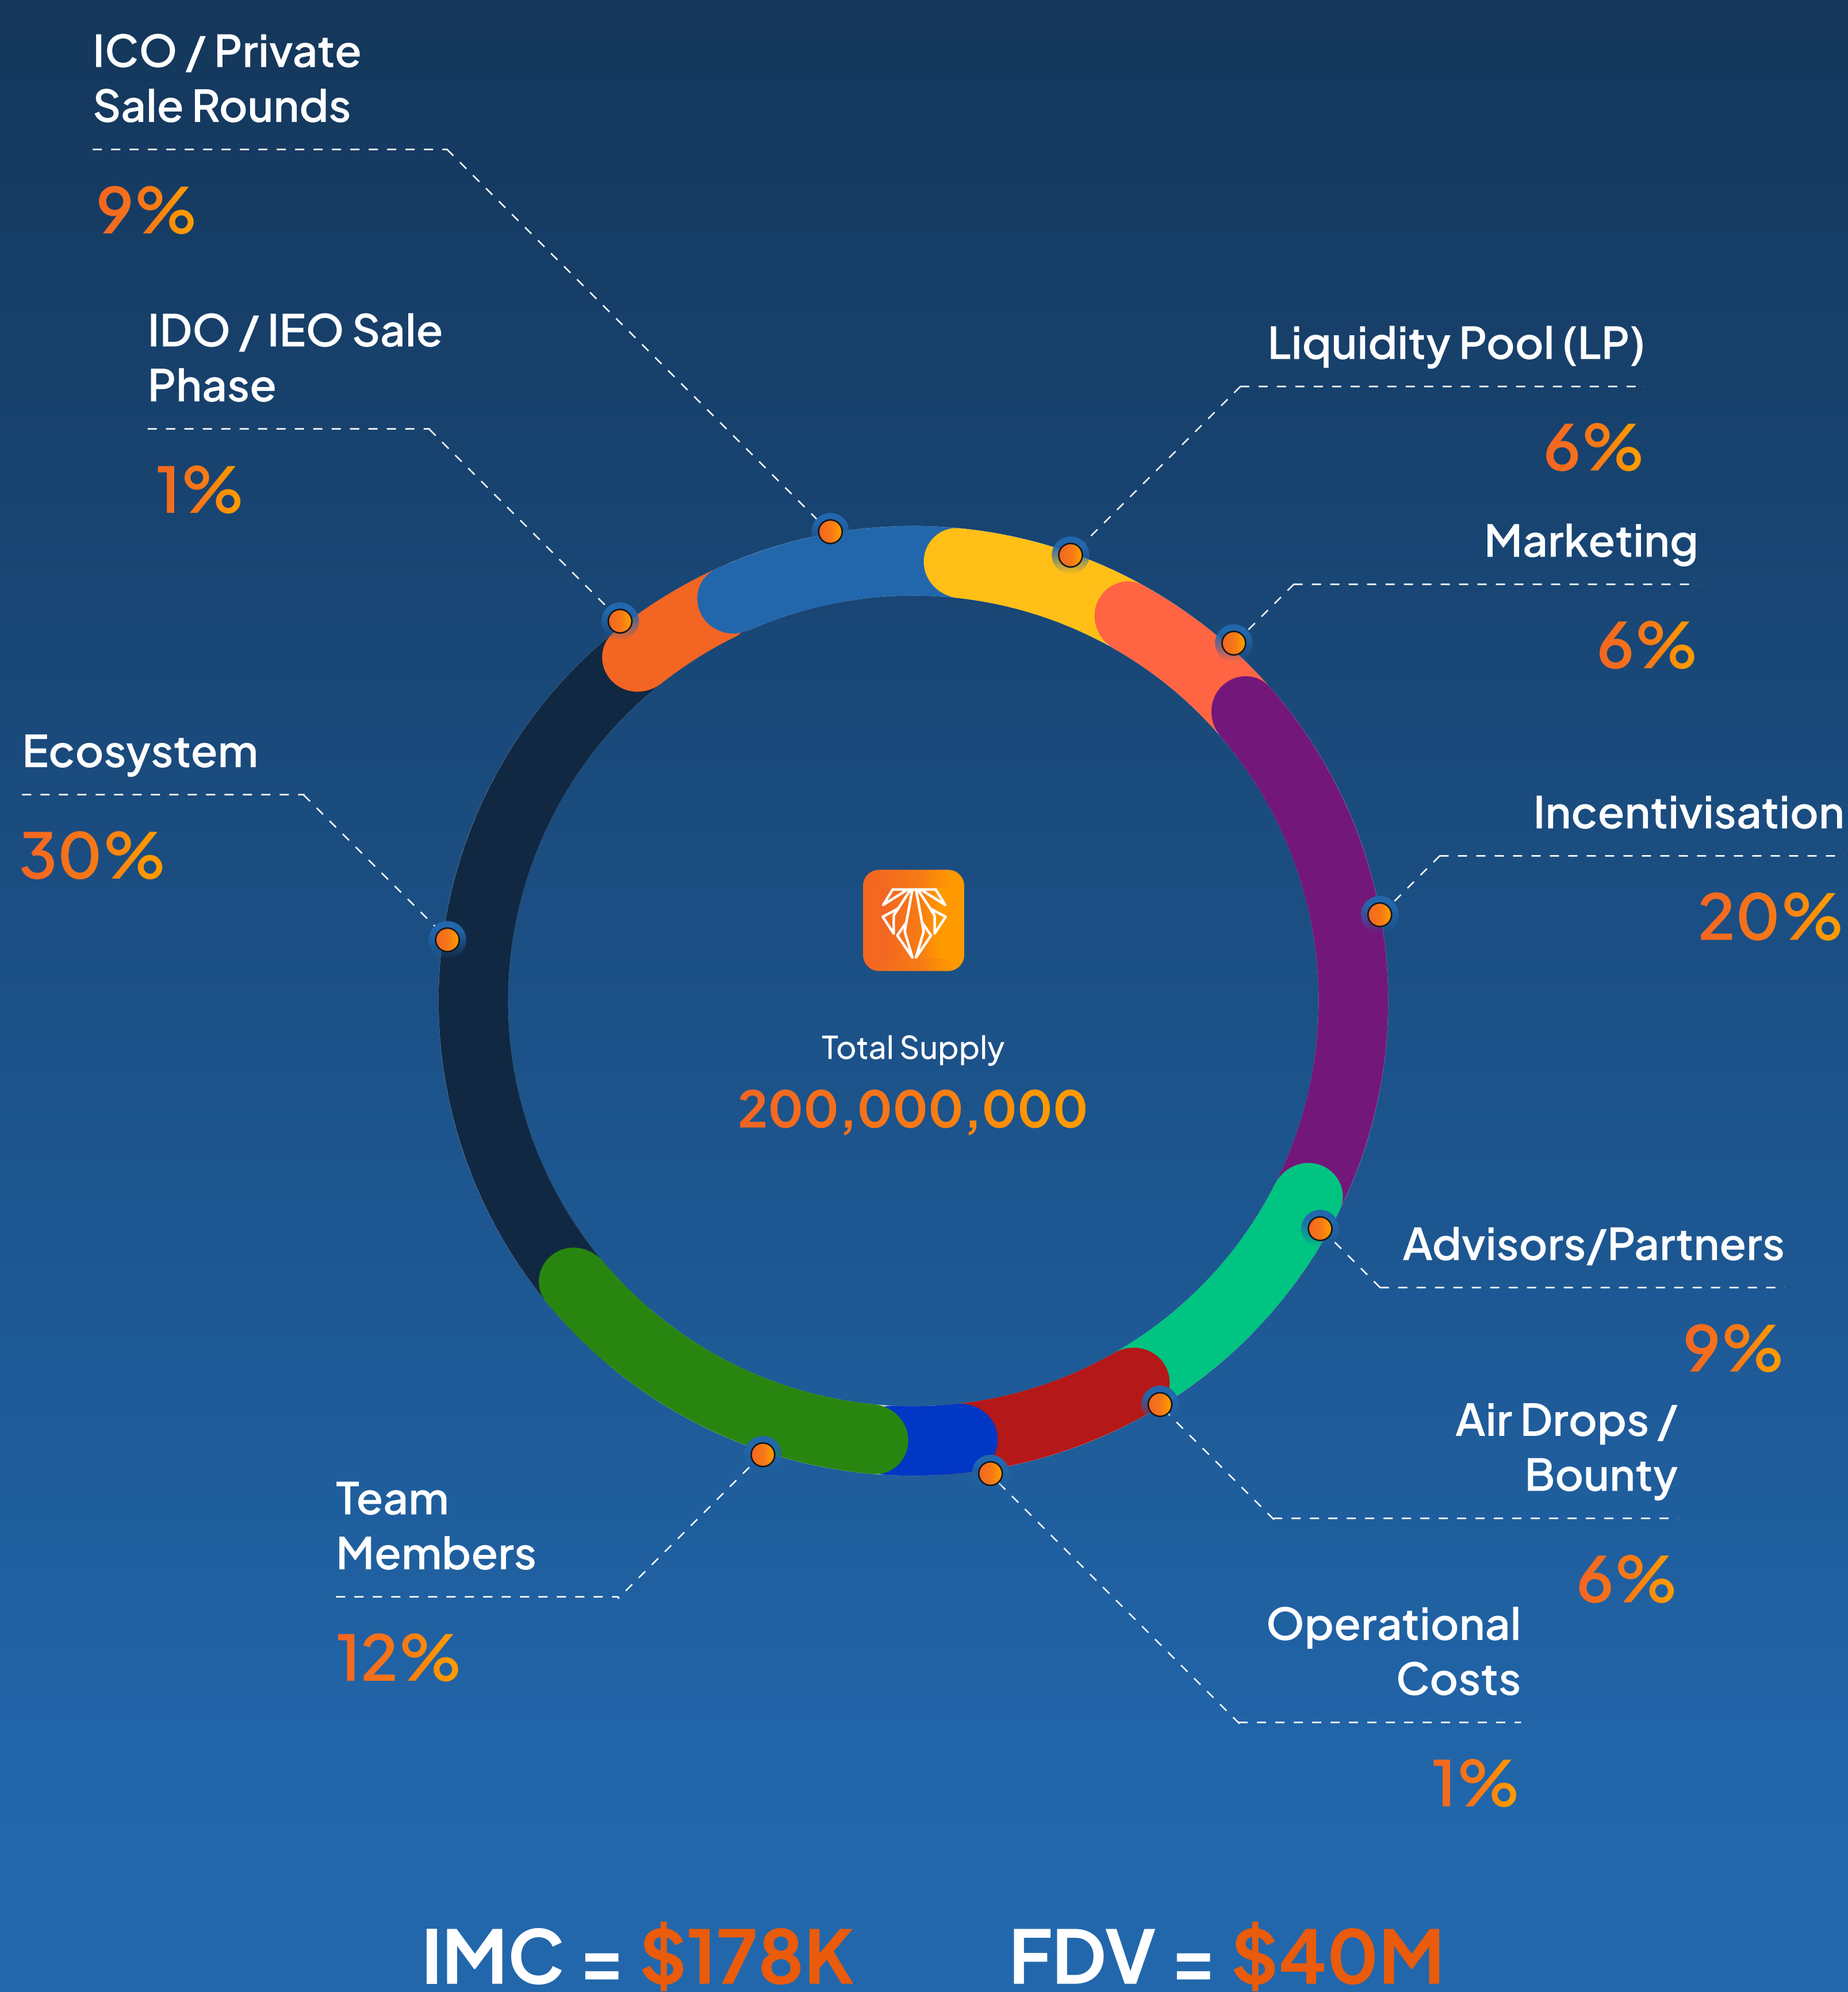

KimberRush

Introducing KimberRush the next-generation gaming experience where players build their own hyper realistic virtual diamond mine and join the hunt for hidden gemstones.

But what makes KimberRush truly special is our 'Play-to-Earn' feature. With real diamonds worth up to \$50,000 waiting to be uncovered in game. Allowing users to earn serious profits from their online activities.
