

## About KimberLite

Welcome to KimberLite, a next-generation blockchain-based solution that is revolutionising the precious commodities sector. BSR Global, our parent company, were first founded in 1968 and have been successfully trading diamonds for more than 10-years. As a market leading company, we recognise the need for efficiency and optimisation in our industry.

Therefore, we have created the KimberLite token, an innovative solution that overcomes the most significant challenges faced by market participants, such as slow transfers and high banking fees, ultimately resulting in billions of dollars in savings annually.

Through our cutting-edge blockchain technology, we ensure instantaneous transfers and establish a single cryptocurrency globally accepted by both end buyers and suppliers. With this, we streamline the supply chain, **making it faster, more efficient, and more profitable.**

However, **KimberLite offers more than a payment solution.** We are building an entire ecosystem centred around diamonds, including a marketplace that offers rough diamonds in Tangible Non-Fungible Token (TNFT) form, that are backed by real diamonds stored in bank vaults.

Furthermore, we are introducing a Metaverse 'Play-to-Earn' game where players can discover real diamonds in-game, some worth up to \$50,000. This positions **the KimberLite ecosystem as the ultimate destination for diamond enthusiasts, as well as the millions of gamers around the globe.**

With our focus on optimisation and cutting-edge technology, **KimberLite is poised to permanently disrupt and transform the diamond industry.**

## TNFT Diamonds

### KimberMarket

KimberMarket is a revolutionary online store which gives everyone the opportunity to acquire precious commodities directly through the purchase of **Tangible-Non-Fungible-Tokens** (TFNTs).

Our unique TNFTs are created by producing a 3D scan JPEG of a real rough diamond, this together with a third party Gemmologist report and bank storage receipt is then 'minted' into a Tangible-Non-Fungible-Token.

What is the difference between a Tangible-Non-Fungible-Token (TFNT) and a normal NFT? The answer is simple, A Tangible Non Fungible Token is backed by a physical real world asset. Our TNFTs, available through KimberMarket, are **guaranteed by Diamonds or Gold** held in storage within a secure vault.

So, what makes them so special? Firstly, the value of diamond historically only ever increases so the asset behind our TNFT is going to be constantly going up in value. Whereas many normal NFTs often depreciate.

Secondly, the owner of the TNFT has the ability to exchange the token held in their wallet for the physical diamond at any time. We will burn the original TNFT and deliver the physical diamond to their nominated address.

This ability to hold an untraceable asset that is always going up in value and the possibility of **exchanging between a 'virtual' and a 'physical' real world asset at any time** is one of the many unique feature of the KimberLite ecosystem.

## Profit Sharing

The back-bone of any successful economy globally is incentivisation, whether it be banks offering interest rates or sellers that provide discounts. The KimberLite ecosystem is no different, we shall reward our valued investors through a variety of innovative systems.

Our **KimberLite Profit Sharing Program** is at the core of these plans. We shall distribute **11.5%** of the **net profits** earned from diamonds traded on our platform amongst loyal holders of KIMBER tokens who meet the qualification requirements.

This Profit Sharing scheme is designed to be exclusive and limited to a select group of individuals, the key details of our unique program, eligibility criteria, distribution calculations, and other important information are as follows:

<b>Eligibility Criteria:</b>	To qualify for the KimberLite Profit Sharing Scheme, investors must hold a minimum of <b>1,400,000</b> tokens for a period of 6-months.
<b>Funding:</b>	The Profit Sharing Scheme is funded by allocating <b>11.5% of the net profits</b> generated from all diamond trades conducted within the KimberLite platform.
<b>Distribution:</b>	The net profits allocated to the scheme will be distributed among qualified investors based on the number of KIMBER tokens they hold. Investors with a larger token holding will receive a proportionately larger share.
<b>Calculation:</b>	The distribution calculations will be based on the total annual net profits and the individual token holdings of each qualifying investor.
<b>Payment Frequency:</b>	Share dividends will be paid out every three months.

## Product Access

The heart and soul of the KimberLite ecosystem is making the exclusive world of diamonds **accessible to everyone**, enter a universe where diamonds are no longer limited to the privileged few but open to all.

We will achieve this central goal not only through the sale of TNFTs in KimberMarket but by granting holders with more than **2,000,000 KIMBER tokens** the opportunity to purchase rough diamonds direct from our supplier network at **dramatically reduced prices.**

Gemstones purchased through our platform will be of the highest possible quality and strictly '**Gem-Grade**' stones. These maybe held as physical assets, provided as security or guarantees and even cut into polished stones.

A rough diamonds value increases exponentially when cut and polished, often by more than **30%**. Making this the chance of a lifetime to both own one of the most desirable commodities know to man, but to also achieve a huge Return On Investment.

**Modernising the \$98.3B per year  
Diamond industry through Web3**
