

# Migrating The \$79B Per Annum Diamond Industry To Blockchain Technology

Our team has spent over 3-years developing KimberLite Token which is the worlds first and only crypto designed specifically for the highly lucrative precious commodities industry. KIMBER will be used globally for buying and selling both Diamonds and Gold, creating unprecedented stability.

The two greatest problems faced daily in commodities transactions are **lost time** due to slow wire transfers and **high banking fees**, costing traders billions annually.

Our token will eliminate these issues and increase efficiency within deals via the instantaneous sending of funds using Blockchain technology. It also establishes a single currency accepted internationally by buyers and sellers.

KimberLite will dominate the commodities sector as a genuine 'utility' token, however, it is not just about making financial payments.

We are building a complete ecosystem focussed around precious commodities. It will include a store offering Gold and Diamonds in Non-Fungible Token (NFT) form as well as a Metaverse 'Play-to-Earn' game where players can find real diamonds in-game worth up to **\$50,000**.

The unique feature of our NFTs is that they will be backed by real diamonds that are held in bank storage. Protecting owners against depreciation in value and offers them the ability to **change between 'virtual' and 'physical' assets** at any time.

Our management team has a combined **90+ years** of experience in commodities, banking, finance, and investment they are ideally qualified to lead KimberLite forward. Technical support is then being provided by our parent company, BSR Global Group.

Their talented team of engineers have been developing multi-million-dollar projects for decades and possess the required technical know-how needed for building our software applications and Web 3 systems.

We have also assembled a team of the best '**Crypto Advisors**' in the industry whose knowledge and trusted advice will guarantee that we reach our full potential with this exceptionally exciting project.

## Management Team

Ian Lavender  
Co-Founder

Paul Hughes  
Co-Founder

Richard Trummer  
Strategic Advisor

Pekka Kelkka  
Crypto Influencer

Yushito Liu  
Investment Specialist

Gabriel Popa  
Co-Founder

Taylor Ryan  
Marketing Specialist

Matthew Wyhatt  
Tech Sales Expert

James Tarling  
Cryptospace Guru

Rohit Tandon  
Blockchain Wizard

## Our Advisors

## Liquidity Protection

We have locked a total of 190 million tokens in a Unicrypt secure locker which will be slowly released at a rate of 2% per month (4,000,000 tokens) over the next 5-years with team tokens locked for **10-years**, safeguarding long-term liquidity in the project.

## Tokenomics

4% ICO Stage Release	9% Advisors / Partners
8% Public Sale (IDO) Phase	28% Future Investment
6% Liquidity Pool (LP)	6% Air Drops / Bounty
6% Marketing	1% Operational / Maintenance
20% Incentivisation	12% Team Members

Token Supply: 200,000,000 KIMBER
